

THE LAST FOUNDER · COMMUNITY KICK-OFF

Build

An open-source, **learn-by-shipping** community for people building with AI agents — we ship a real startup together.

Open source

Ship a real MVP

Built with agents

WHAT IS THIS?

We don't just talk about agents. We ship with them.

Build is a community that learns by **doing**. Together we'll take one real open-source startup from idea to launch — and document what actually works along the way.

No theory-only meetups. A live repo, real pull requests, real users.

Three goals

01

Learn by shipping

Use AI agents to build for startups — Cofounder.co, Claude, paperclip.ing and more. Hands on the keyboard, not slides.

02

Teach each other

Share what actually works — and what doesn't. The community's edge is its collective, real-world knowledge.

03

Launch a real MVP

Not a demo. A working open-source product with real users — built, deployed, and marketed together.

The pilot: **Quest Board**

What Quest Board is

- A **GitHub-native quest board** for proposing and launching open-source projects.
- The place where humans and agents coordinate what to build next.
- A live playground where all skill levels can contribute.

How we work

- Start as a **Cofounder.co** project, with shared working principles.
- Explore the agent **tool stack** as we go and write down what wins.
- **Pull requests welcome** — from first-timers to experts.

Revenue? Maybe. For now the goal is **learning** and **real-world impact**.

THE REPO & HOW TO JUMP IN

Everything lives in one place

README.md Start here — mission, goals, links.

METHODOLOGY.md How we build, step by step.

TEAM.md Who's building & how to join.

BUSINESS.md The why and the model.

TOOLS.md The agent tool stack we use.

CoFounder.co.md Our principles for working with Cofounder.co.
